

Experiment Quantum Imagination theory

I suggest that a group of People
could come to meet me on Friday, 07/10/14

I made this Reality the day before
by sending an Email to a contact
The contact did not know about the
Experiment. They may have been doing some
Research on me.

I told them they needed to fill up
a Jet, Fly here to meet me on Friday.

That is the only outcome.

I then waited until morning and
sent the people I will meet letting
them know they would be meeting
me today. It appears the communication
was not sent to them. They suggested
that teleportation would be needed.

At this point I created the "Impossible"
Scenario - "It is impossible that the
Class team is coming to Kansas City today."

This we know is not true, however
making them realise this must force them
to prove that it is possible.

This is a test of many degrees

- Trust
- Responsibility
- Follow through
- Courage
- Proof
- Golden Rule
- Character

In physics the electron must break out
the box. I have made my self into
a box, and I am acting as the electron.

If I escape which I must — they
will be here

If I don't escape — Dark matter

Actual possible

Possible is possible until it is realised.
~~that~~ or perceived that something is
Impossible.

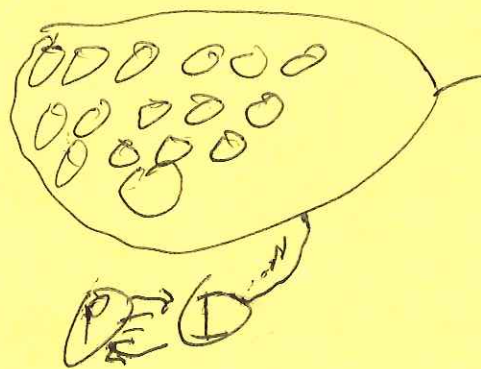

By definition a "false Impossible" must
be proved as possible

— If Non Pop "must be
Impossible" ~~proven~~ ^{proven}

Creators Impossible must be detected
by possible —

Possible
depends
on

If one possible becomes
Impossible all possibles
become "Actual Impossible"
Thus collapsing all Bubbles
of possible — "Actual Impossible"
is Dark Matter

and Energy
Maybe space
time
