

An introduction to experiment building with OpenSesame

Sebastiaan Mathôt

<http://www.cogsci.nl/smathot>

The research leading to these results has received funding from the People Programme (Marie Curie Actions) of the European Union's Seventh Framework Programme (FP7/2007-2013) under REA grant agreement n° 622738.

Cognitive Neuroimaging Unit, NeuroSpin, Paris, Jan 13, 2015

Today

- A short introduction (20 min)
- Create an experiment (75 min) ...
- Coffee break
- ... and some more (75 min)

About OpenSesame

About OpenSesame

- A graphical experiment builder
 - Drag-and-drop, point-and-click
 - Complement with Python scripting
- Open source
 - Free of charge
 - Source code available
- Cross platform
 - All major platforms
 - Runtime support for Android

About OpenSesame

- A broad focus
 - Fits many types of research
- Psychophysics
 - Reaction time tasks, complex stimuli, etc.
- Neuroimaging
 - Parallel-port triggers, etc.
- Social psychology
 - Questionnaires, etc.
- Clinical applications
 - Test batteries, mobile (tablet-based) experiments, etc.

Support

- Documentation
 - <http://osdoc.cogsci.nl>
- Community
 - <http://forum.cogsci.nl>
 - >1200 members, daily activity, very responsive
- Outlook
 - Will OpenSesame still be there in [X] years?
 - Active development team
 - Large user base (>400,000 hits in 2014 for cogsci.nl)

Developers

- A core team
 - Daniel Schreij (VU University Amsterdam)
 - Lotje van der Linden (CNRS / Aix-Marseille)
 - Edwin Dalmajer (Oxford)
 - Sakis Brouzioutis (Radboud University Nijmegen)
 - Eduard Ort (VU University Amsterdam)
 - Sebastiaan Mathôt (CNRS / Aix-Marseille)
- Occasional contributors

Teaching

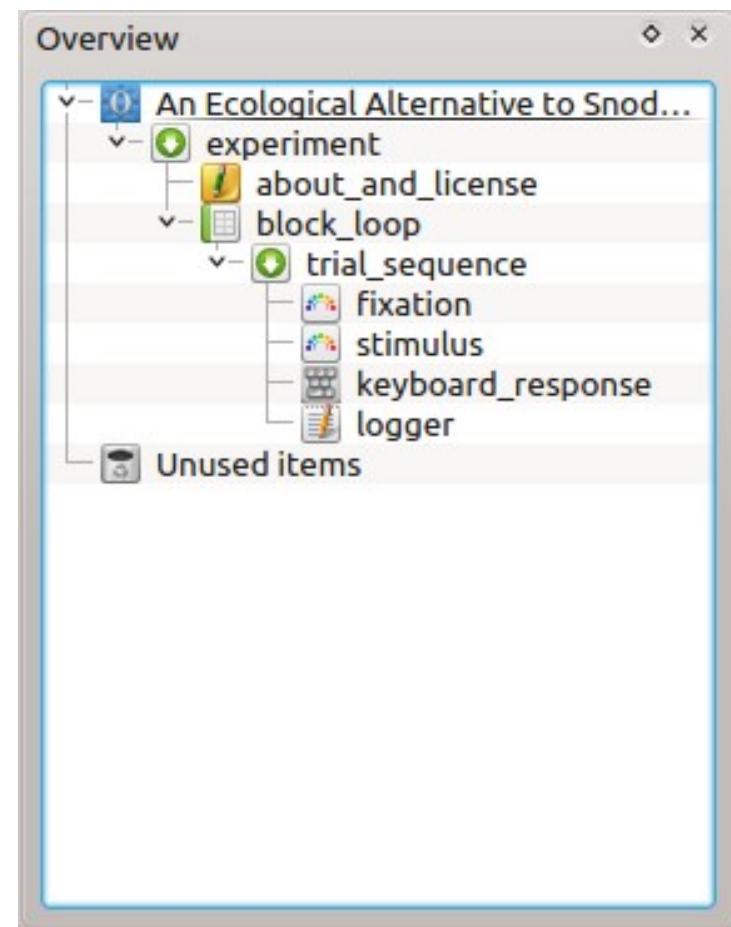

Teaching

- No licensing issues
- No steep learning curve
- Used for teaching at universities across the world
 - Used for many bachelor and master projects
 - Used as part of courses on programming/ research methods

Using OpenSesame

Items

- **Items** are building blocks
- **Ten core items** offer common functionality

Plug-ins

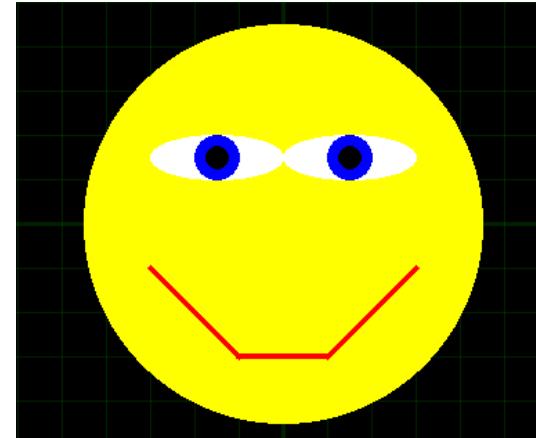

- **Plug-ins** are additional items
 - Eye trackers (PyGaze) (Dalmajer, Mathôt, Van der Stigchel, 2014)
 - Video playback
 - Forms
 - Etc.
- Plug-ins also provide graphical controls
- New plug-ins can be written easily

User interface vs script

Combining GUI and script

- The GUI generates a script
 - Custom language
 - Not Python!
- You can edit this script directly
- Afterwards you can continue using the GUI

Script (001, 015) Apply and

```
1 set duration "keypress"
2 set start_response_interval "no"
3 set description "Displays stimuli"
4 draw circle 0 0 288 fill=1 penwidth=1 color=yellow show_if="always"
5 draw line -96 32 -32 96 penwidth=4 color=red show_if="always"
6 draw line 32 96 96 32 penwidth=4 color=red show_if="always"
7 draw line -32 96 32 96 penwidth=4 color=red show_if="always"
8 draw ellipse -96 -64 96 32 fill=1 penwidth=1 color=white show_if="always"
9 draw ellipse 0 -64 96 32 fill=1 penwidth=1 color=white show_if="always"
10 draw ellipse -64 -64 32 32 fill=1 penwidth=1 color=blue show_if="always"
11 draw ellipse 32 -64 32 32 fill=1 penwidth=1 color=blue show_if="always"
12 draw fixdot -48 -48 color=black show_if="always"
13 draw fixdot 48 -48 color=black show_if="always"
```

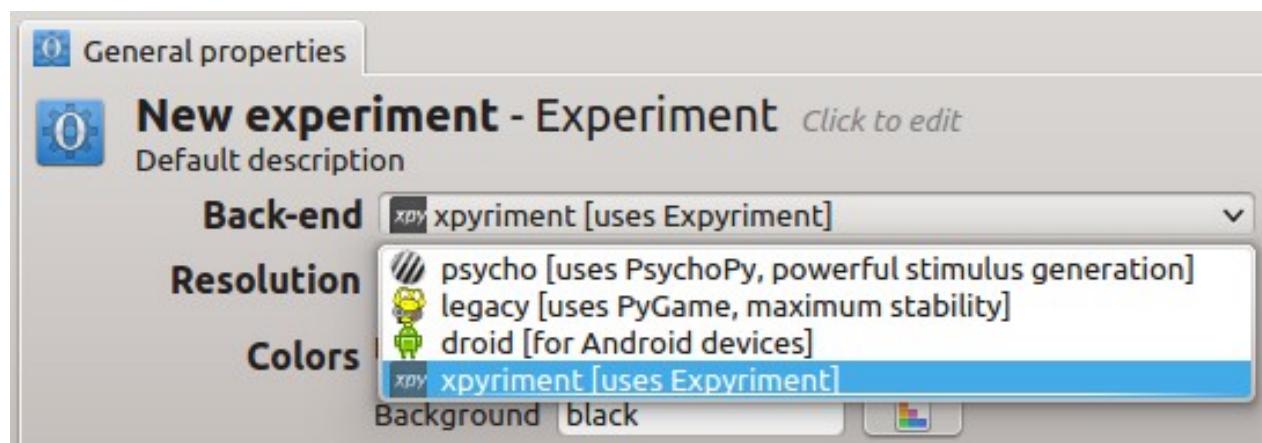

Combining GUI and script

- You can create a prototype display using the GUI, and add variables using scripting
- Prototype script:
 - `draw image 0.0 0.0 "gaze_left.png" scale=1.0 center=1 show_if="always"`
- Variable script:
 - `draw image 0.0 0.0 "gaze_[gaze_cue].png" scale=1.0 center=1 show_if="always"`

Back-ends

Back-ends

- There are many ways to control the display, input, etc.
- OpenSesame is not tied to one method
- **Back-ends** can be flexibly added, like plug-ins

Back-ends

- Each back-end has its own benefits
 - Temporal precision
 - Stability
 - Extra functionality
 - Cross-platform support
- **Xpyriment** → Simple with good temporal precision.
Experiment-based ([Krause & Lindeman, 2013](#))
- **Legacy** → Fallback, modest temporal precision
- **Psycho** → PsychoPy based, good temporal precision
([Peirce, 2007](#))
- **Droid** → For Android devices

And now for the tutorial!
