

3D cell morphology after treatment with Src inhibitors

Comparison of MAT-inducing potential of different Src inhibitors. HT1080 cells were treated with dasatinib (DAS, 1 μ M), saracatinib (SAR, 1 μ M), or UM-164 (100 nM) in 3D collagen. Statistical analysis of data from three independent experiments showed significant changes after all treatments (p -values < 0.001). Error bars - standard errors.
