

# Editing the figshare materials

We have created a series of editable graphics to help with communications and adding a somewhat 'figshare flavour'. They can be edited using the Adobe suite, ideally in Photoshop. Here are a few recommendations that may be of help.

## Add your logo

Place your organisation's logo in the top left corner of the document. A high resolution image or a vector file would be ideal.

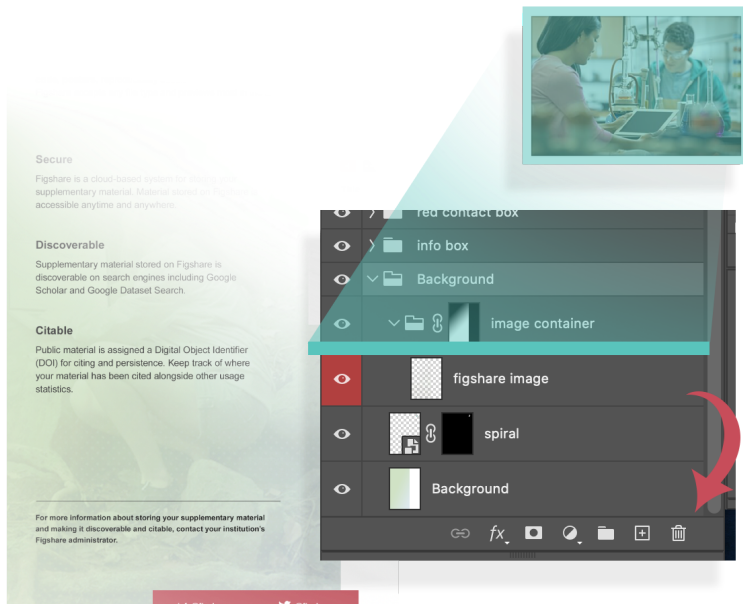

## Edit the text as needed

All the text placed in the base materials is editable. The font used is Arial with different variations and settings but it can all be customised and adapted to suit your needs.

## Change the background image

The image should be replaced with another of your own by simply placing it in the designated folder. If a background image is not needed, it can simply be removed or hidden and a plain coloured background will remain instead.

## Export

Before printing, save the file or export it as PDF or another file type that is suitable for print.
