

Supplementary Information

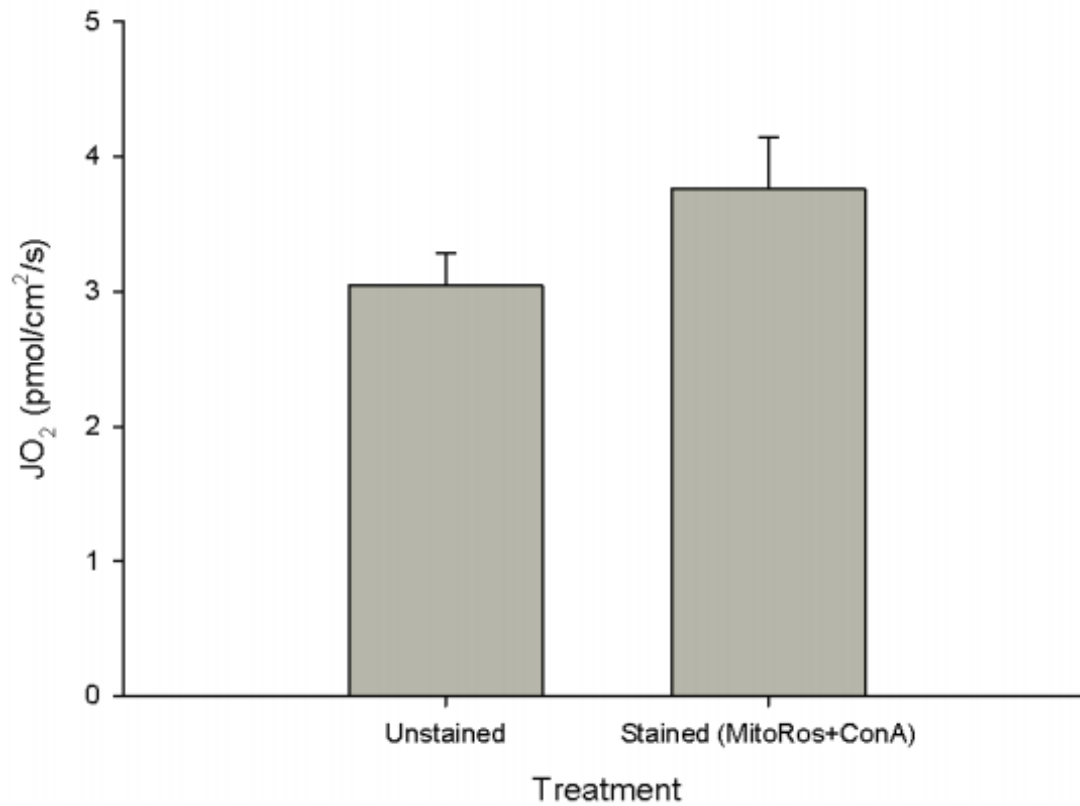

Figure S1. Effect of MitoRos and ConA cell stain on regional JO₂ of 4 dpf larval zebrafish. One group of larvae were stained with MitoRos and ConA while another group was left unstained. JO₂ was measured at three arbitrary points across the yolk sac extension for both groups. Data are means \pm s.e.m (n = 5). Results were analyzed using a Student's *t*-test (p = 0.154).
