## Experimental section

Chemistry. General Details. All commercially available reagents and solvents were used without further purification unless otherwise stated. All reactions were carried out under an inert atmosphere of dry nitrogen in oven-dried glassware unless otherwise stated. Flash column chromatography was performed using 40-60 $\mu \mathrm{m}$ Silica Gel 60 (EMD Chemicals, Inc.) as the stationary phase, or pre-packed columns from ISCO Inco., Biotage, or Thomson Instrument Co. ${ }^{1} \mathrm{H}$ NMR spectra were recorded on a Bruker 400 or 500 MHz machine with tetramethylsilane or residual protiated solvent used as a reference. ${ }^{13} \mathrm{C}$ NMR were recorded on a Bruker DRX-500 instrument operating at 125 MHz with residual ${ }^{12} \mathrm{C}$ solvent used as a reference. Low resolution mass spectra were recorded using a Waters Micromass ZQ with electrospray ionization. High resolution mass spectra were recorded using a Waters Micromass LCT time of flight mass spectrometer with electrospray ionization.

(E)-1-nitrohexa-1,5-diene. In an oven-dried 1 L round-bottomed flask pent-4-enal (11.3 g, 134 mmol ) was dissolved in toluene ( 300 mL ) to give a colorless solution. After cooling to $0^{\circ} \mathrm{C}$, nitromethane ( 72.4 $\mathrm{mL}, 1343 \mathrm{mmol}$ ) and 1,1,3,3-tetramethylguanidine ( $1.685 \mathrm{~mL}, 13.43 \mathrm{mmol}$ ) were added. After the mixture was stirred at $0{ }^{\circ} \mathrm{C}$ for 60 min , TLC showed a major product (4:1 hexane/ethyl acetate). Methanesulfonyl chloride ( $15.7 \mathrm{~mL}, 202 \mathrm{mmol}$ ) and triethylamine ( $28 \mathrm{~mL}, 202 \mathrm{mmol}$ ) were added. The cooling bath was removed and the mixture was stirred at r.t. for 1 h . After 1 h , a further 0.5 equiv. of methanesulfonyl chloride ( 5.2 mL ) and triethylamine $(9.3 \mathrm{~mL})$ were added to the mixture and the reaction continued for another $h$. It was quenched with saturated sodium bicarbonate solution and diluted with diethyl ether. The layers were separated and the aqueous layer was extracted with diethyl

The residue was purified by flash column chromatography up to $20 \%$ ethyl acetate/hexanes. The major uv-active fraction was pooled and concentrated to a light yellow oil (further dried under house vac over 3 days: $12.30 \mathrm{~g}, 72 \%$ ): ${ }^{1} \mathrm{H}$ NMR (400 MHz, CHLOROFORM- $d$ ) $\delta$ ppm 7.24 (ddd, $J=13.74,7.15,6.96 \mathrm{~Hz}, 1 \mathrm{H}) 6.98(\mathrm{~d}, J=13.55 \mathrm{~Hz}, 1$ H) $5.67-5.86(\mathrm{~m}, 1 \mathrm{H}) 4.98-5.14(\mathrm{~m}, 2 \mathrm{H}) 2.37(\mathrm{q}, J=7.03 \mathrm{~Hz}, 2 \mathrm{H}) 2.27(\mathrm{q}, J=6.94 \mathrm{~Hz}, 2 \mathrm{H}) ;{ }^{13} \mathrm{C}$ NMR (101 MHz, CHLOROFORM- $d$ ) $\delta$ ppm 140.82-141.82, 139.50, 135.60, 115.56-116.67, 30.49 31.82, 26.73-27.94.
