

Supplementary Information

Protein	p-value from ANOVA model	p-value from t-test
sp P00738 HPT_HUMAN	3.72e-04	7.043e-05
sp P01024 CO3_HUMAN	1.21E-06	0.04646
sp P02790 HEMO_HUMAN	1.29E-11	0.1803
sp P04004 VTNC_HUMAN	8.80E-17	0.1386

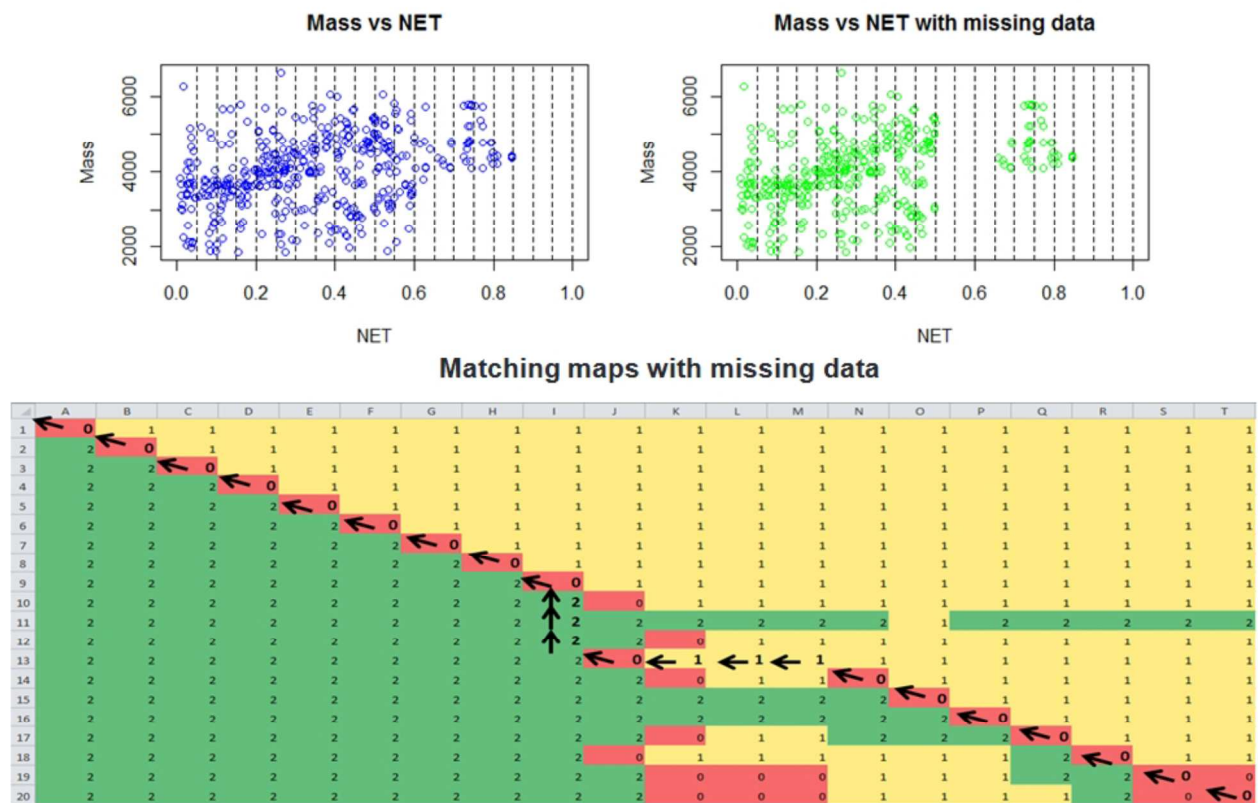

Supplementary Table 1: Comparison of p-values of four significant proteins from the ANOVA model to those acquired from a simple t-test. The t-test fails to capture site-specific variation within a glycoprotein among classes.

Protein	Control Average Spectral Count	Cancer Average Spectral Count
sp P00738 HPT_HUMAN	6.08	13.39
sp P01024 CO3_HUMAN	231.11	257.45
sp P02790 HEMO_HUMAN	48.92	70.71
sp P04004 VTNC_HUMAN	9.33	8.83

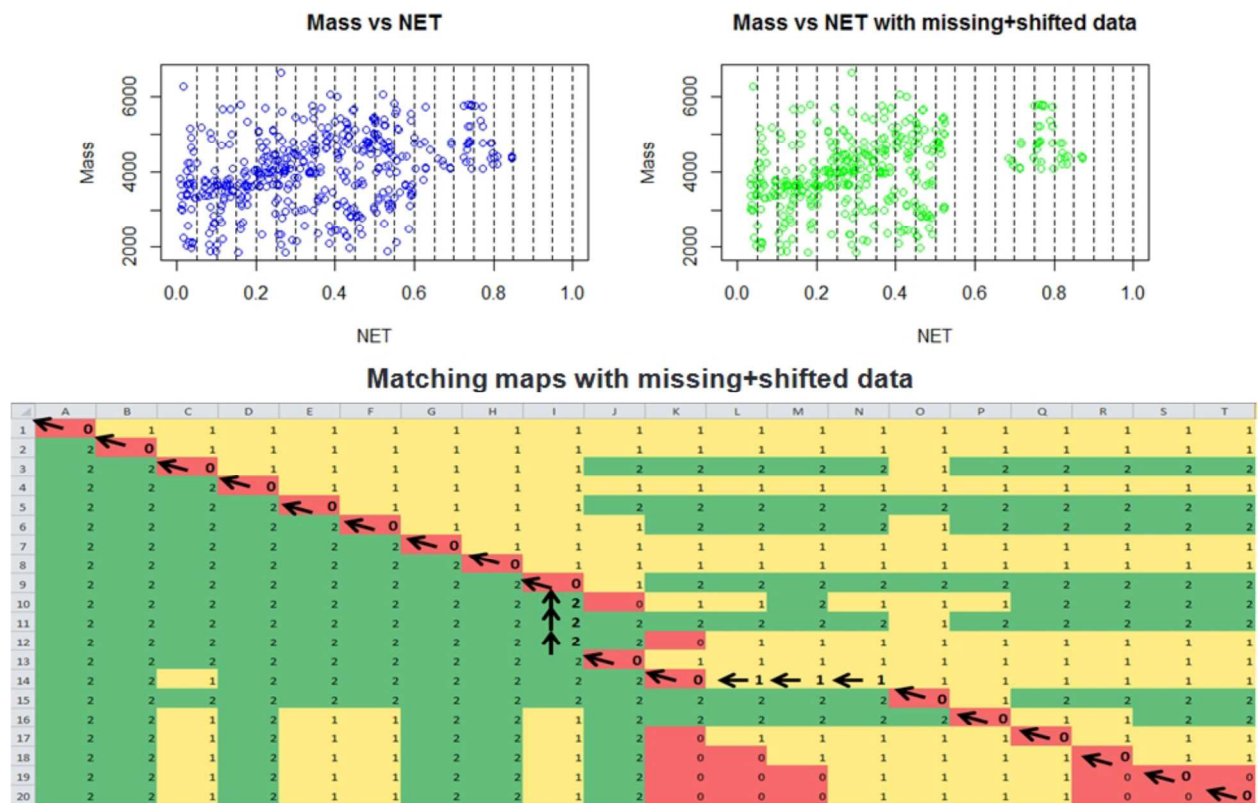

Supplementary Table 2: Average total protein spectral count in pooled cancer and control datasets. The spectral count was derived from doing a MASCOT search on non-glycosylated peptides of the glycoprotein.

Supplementary Figure 1: GlycoMap alignment in the scenario when the target and reference are the same

Supplementary Figure 2: GlycoMap alignment in the scenario when the reference is the same as target map but with points missing.

Supplementary Figure 3: GlycoMap alignment in the scenario when the reference is the same as target map but with both missing and shifted points.
