Table S2. EDX spectra analyses of abaxial leaf surface covered with suspension of  $CoFe_2O_4$  nanoparticles (nominal concentration 5000 µg/g). Analytical results in weight % for analysed elements in all five spectra taken in areas marked in Figure S1B.

Figure S1. TEM characterization of  $CoFe_2O_4$  nanoparticles and SEM/EDX analyses of  $CoFe_2O_4$  nanoparticles on leaves from experiment D. (A) TEM micrograph of  $CoFe_2O_4$  NPs. (B) Abaxial leaf surface covered with suspension of  $CoFe_2O_4$  nanoparticles (nominal concentration 5000 µg/g) with marked areas where EDX spectra were taken.

Figure S2. Feeding rate (mg of consumed leaf per mg of animal weight) of animals fed for 14 days on food dosed with CoCl<sub>2</sub> or CoFe<sub>2</sub>O<sub>4</sub> nanoparticles. Symbols on the box plot represent minimum and maximum data values (whiskers), mean value ( $\Box$ ), 75<sup>th</sup> percentile (upper edge of box), 25<sup>th</sup> percentile (lower edge of box), median (line in box) and max and min value (-). Statistically significant differences between exposed and control animals are marked with \*\*\* (p < 0.001). Nominal exposure concentrations (1000, 2000 or 5000 µg CoCl<sub>2</sub> or nano-CoFe<sub>2</sub>O<sub>4</sub>/g of leaf) and the number of animals (n) per group are provided on the x-axis.
