Description: Time-dependent effect of PMA stimulation on the protein levels of signaling molecules in A549 cells.

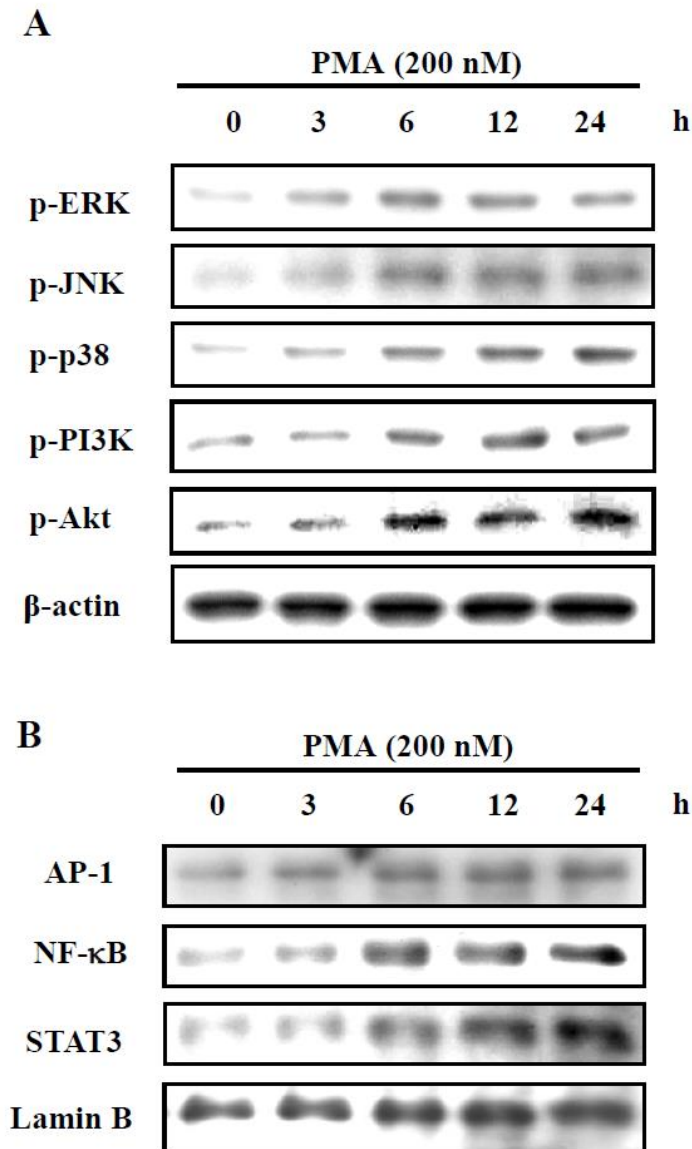

Figure S1. Time-dependent effect of PMA stimulation on the protein levels of signaling molecules in A549 cells. Cells were incubated with 200 nM PMA for 0, 3, 6, 12, and 24 h. The cytosolic cell lysates and nuclear extracts were subjected to SDS-PAGE followed by Western blots which respectively with the phosphorylated antibodies of MAPK and PI3K/Akt signaling (A) and the antibodies of NF- κ B (p65), AP-1 (c-Jun), and STAT3 transcription factors (B).
