^a Glycosylation site localized within the PFAM domain (X).

^b BLASTP (protein-protein blast <http://blast.ncbi.nlm.nih.gov/>) search to identify protein sequences homolog to the hypothetical *Vitis vinifera* N-linked glycoproteins.

^c SDAP database (<http://fermi.utmb.edu/SDAP/>) to identify any allergen similar to the N-linked glycoproteins identified presenting a sequence homology with an E score less than 0,01.
