## 1 Syntheses of the receptors 1 and 2.

### 1.1 Synthesis of the receptor 1.

The synthesis of $\mathbf{1}$ started from 1,3,5-tris(bromomethyl)-2,4,6-trimethyl-benzene (5), which was converted into the compound 7 via reaction with two equivalents of 2-amino-4,6-dimethyl-pyridine (6), followed by the reaction with one equivalent of 2-aminomethyl-15-crown-5 (8), as shown in Scheme S1.

## SCHEME S1
