

Online Supplementary Fig. 1. MacLRP^{-/-} macrophages are deficient in LRP.

LRP expression was detected by flow cytometry from wt (solid line) or Mac LRP^{-/-} mice (dashed line). The filled histogram is the isotype control.

Online Supplementary Fig. 2. Annexin V and propidium iodide staining of Jurkat-E and Jurkat-ActD cells.

Apoptosis was measured by Annexin V and Propidium Iodide (PI) staining. Black bars indicate the average percentage of cells positive for Annexin V and hatched bars indicate the average percentage of cells positive for both Annexin V and PI ($n \geq 9$).
