## General information

Copper-catalyzed reactions were performed in a flame-dried Schlenk under argon. THF used in these reactions was purchased from Acros ( $99.9 \%$ extra dry Acroseal ${ }^{\mathrm{TM}}$ ). Otherwise, THF was distilled over sodium and benzophenone. DCM was distilled over $\mathrm{CaH}_{2}$. Solvents used for work-up were of technical grade. Dppf was purchased from Fluorochem. Benzoyl fluoride was purchased from VWR or Acros. Vinylidenecyclohexane was purchased from SigmaAldrich. 3-Methyl-1,2-butadiene was purchased from TCI. Copper(II) acetate was purchased from Acros. Other commercial reagents were purchased from Acros, Fluorochem, TCI, Sigma-Aldrich, VWR or Alfa-Aesar and used as received. Thin Layer Chromatography were performed on aluminium plates bearing a 0.25 mm of Merck Silica Gel $60 \mathrm{~F}_{254}$, visualized by fluorescence quenching at 254 nm and chemical revelation using acidic solution of paraanisaldehyde or basic solution of potassium permanganate. Flash chromatography was performed using silica gel $60(40-63 \mu \mathrm{~m})$. NMR analysis was performed at room temperature on Bruker 300 MHz or 500 MHz Fourier Transform Spectrometer. Residual solvent peaks of $\mathrm{CDCl}_{3}$ were used as internal references: 7.26 ppm for ${ }^{1} \mathrm{H}$ spectra and 77.16 ppm for ${ }^{13} \mathrm{C}$ spectra. ${ }^{19} \mathrm{~F}$ NMR was recorded in $\mathrm{CDCl}_{3}$ using $\mathrm{C}_{6} \mathrm{~F}_{6}$ as an external standard. Chemical shifts $(\delta)$ are reported in ppm and spin-spin coupling constants $(J)$ are given in Hz . The following abbreviations were used in order to describe de peaks multiplicities: $\mathrm{s}=$ singlet, $\mathrm{d}=$ doublet, t $=$ triplet, $\mathrm{q}=$ quartet, quint $=$ quintuplet, hex $=$ hexuplet, hept $=$ heptuplet, $\mathrm{m}=$ multiplet, $\mathrm{br}=$ broad. HRMS spectra were recorded using Thermo Scientific QExactive. Infrared absorptions were recorded as a liquid deposition on a ZnSe crystal on a Shimadzu FTIR 8400 Spectrophotometer.

## Preparation of the allenes

## Procedure A:

Step 1: The cyclopropanation of the 1,1-distubstituted alkene was carried out according to literature procedures. ${ }^{1,2}$

To a solution of alkene ( 1.0 equiv) and cetrimonium bromide ( 0.12 equiv) in dichloromethane ( $0.16 \mathrm{~mL} / \mathrm{mmol}$ alkene) was added dropwise aqueous solution of NaOH ( 4.6 equiv.; 0.5 mL water $/ \mathrm{mmol}$ ). After $5 \mathrm{~min}, \mathrm{CHBr}_{3}$ ( 2 equiv) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}(0.08 \mathrm{~mL} / \mathrm{mmol}$ alkene) was added and left stirring at room temperature for 2-3 days. Water and DCM were added. The aqueous phase was extracted with DCM. The combined organic phases were washed with saturated NaCl solution, dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and the solvent removed under reduced pressure. Purification by flash chromatography on silica gel afforded the pure cyclopropane products.

Step 2: The preparation of the 1,1-disubstituted allenes was carried out according to a literature procedure. ${ }^{2}$

EtMgBr ( 3.0 M in THF, 1.5 equiv was added dropwise via syringe pump to a solution of cyclopropane ( 1.0 equiv) in dry THF ( $2 \mathrm{~mL} / \mathrm{mmol}$ of cyclopropane) under nitrogen atmosphere at room temperature. The resulting mixture was allowed to stir at room temperature for an additional 30 minutes. Then the reaction was quenched by saturated $\mathrm{NH}_{4} \mathrm{Cl}$ solution, and extracted with diethyl ether ( $15 \mathrm{~mL} \times 3$ ). The combined organic layers was washed with brine, and dried over anhydrous $\mathrm{Na}_{2} \mathrm{SO}_{4}$. After removing the solvent under reduced pressure, the crude product was purified by flash column chromatography on silica gel afforded the desired allenes 3 .

## (3-Methylpenta-3,4-dien-1-yl)benzene (3a)

Following procedure A starting with (3-methylbut-3-en-1-yl)benzene ( 36.3 mmol ). ${ }^{3}$
Flash chromatography: PE
Overall yield: 55\% of a colourless oil.

[^0]Spectroscopic data are in agreement with those reported in the literature. ${ }^{4}$

## 2-Bromo-4-methyl-1-((3-methylpenta-3,4-dien-1-yl)oxy)benzene (3d)

This substrate was prepared via a Mitsunobu reaction according to the literature procedure. ${ }^{5}$

To a solution of 3-methylpenta-3,4-dien-1-ol ${ }^{6}$ (1.0 equiv, 5.0 mmol ), 2-bromo-4methylphenol ( 1.44 equiv, 7.2 mmol ) and triphenylphosphine ( 1.5 equiv, 7.5 mmol ) in THF $(15 \mathrm{~mL})$ was added diisopropyl azodicarboxylate ( 1.2 equiv, 6.0 mmol ) dropwise at room temperature. The reaction mixture was stirred 14 h and the solvents were evaporated. The crude mixture was dissolved in DCM and filtered on a pad of silica (eluting with $\mathrm{PE}_{\mathrm{E}} \mathrm{Et}_{2} \mathrm{O}$ 97.5:2.5).

Purified by flash chromatography on silica gel (eluent: $\mathrm{PE} / \mathrm{Et}_{2} \mathrm{O} 99: 1$ to $98: 2$ to $97.5: 2.5$ ) afforded the pure product as a colourless oil ( $385 \mathrm{mg}, 1.44 \mathrm{mmol}, 29 \%$ yield). ${ }^{7}$

## Hexa-4,5-dien-1-ylbenzene (3k)

$$
\begin{gathered}
\mathrm{C}_{12} \mathrm{H}_{14} \\
\mathrm{M}=158.24 \mathrm{~g} \cdot \mathrm{~mol}^{-1}
\end{gathered}
$$

This substrate was prepared via a Crabbé reaction according to a literature procedure. ${ }^{11}$

Pent-4-yn-1-ylbenzene ( 1.0 equiv, $34.9 \mathrm{mmol}, 5.00 \mathrm{~g}, 5.3 \mathrm{~mL}$ ), dicyclohexylamine ( 1.8 equiv, $62.8 \mathrm{mmol}, 11.39 \mathrm{~g}, 12.5 \mathrm{~mL}$ ), copper(I) iodide ( 0.5 equiv, $17.45 \mathrm{mmol}, 3.32 \mathrm{~g}$ ) and
paraformaldehyde ( 2.5 equiv, $87.25 \mathrm{mmol}, 2.62 \mathrm{~g}$ ) were added sequentially in dioxane ( 150 mL ). This mixture was stirred at $100^{\circ} \mathrm{C}$ during 17 h . The reaction mixture was cooled down to room temperature and was filtered over silica (eluting with PE). The solvents were removed under reduced pressure. The crude was filtered again over silica (eluting with PE) and the solvents were evaporated.

Purified by flash chromatography (PE) afforded the pure product as a colourless oil ( 3.58 g , $22.6 \mathrm{mmol}, 65 \%$ yield).

| ${ }^{1} \mathbf{H} \mathbf{N M R}(\delta, \mathrm{ppm})$ | $7.30-7.25(\mathrm{~m}, 2 \mathrm{H}), 7.19-7.15(\mathrm{~m}, 3 \mathrm{H}), 5.12(\mathrm{p}, J=6.7 \mathrm{~Hz}, 1 \mathrm{H})$, |

## (((5-Methylhexa-3,4-dien-1-yl)oxy)methyl)benzene (3m)

$$
\begin{gathered}
\mathrm{C}_{14} \mathrm{H}_{18} \mathrm{O} \\
\mathrm{M}=202.30 \mathrm{~g} \cdot \mathrm{~mol}^{-1}
\end{gathered}
$$

This substrate was prepared according to a literature procedure. ${ }^{13}$

To a solution of NaH ( $60 \%$ in grease, 1.5 equiv, $2.67 \mathrm{mmol}, 106.8 \mathrm{mg}$ ) in DMF ( 10 mL ) was added 5-methylhexa-3,4-dien-1-ol ( 1.0 equiv, $1.78 \mathrm{mmol}, 200.0 \mathrm{mg}, 0.23 \mathrm{~mL}$ ) dropwise at 0 ${ }^{\circ} \mathrm{C}$. After stirring 20 min at $0^{\circ} \mathrm{C}$, benzyl bromide ( 1.5 equiv, $1.78 \mathrm{mmol}, 456.7 \mathrm{mg}, 0.32 \mathrm{~mL}$ ) dropwise and the reaction mixture was stirred overnight while warming up to room temperature. The reaction was quenched by saturated $\mathrm{NH}_{4} \mathrm{Cl}$ solution, and extracted with diethyl ether (x3). The organic layers were washed with brine (x3) and dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$. The solvents were then evaporated and purification by flash chromatography on silica gel (eluent: $\mathrm{PE} / \mathrm{Et}_{2} \mathrm{O} 97.5 / 2.5$ ) afforded the pure product as a colourless oil ( $282.8 \mathrm{mg}, 1.40$ mmol, $79 \%$ yield).

| MR ( $\delta, \mathrm{ppm}$ ) | $7.36-7.26$ (s, 5H), $5.02-4.94(\mathrm{~m}, 1 \mathrm{H}), 4.52$ (s, 2H), 3.53 (t, J = 6.9 |
| :---: | :---: |
| ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) | Hz, 2H), 2.28 (q, $J=6.8 \mathrm{~Hz}, 2 \mathrm{H}), 1.67$ (d, $J=2.9 \mathrm{~Hz}, 6 \mathrm{H})$ |
| ${ }^{13}$ C NMR ( $\delta, \mathrm{ppm}$ ) <br> ( $75 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) | $202.5,138.7,128.5,127.8,127.6,95.4,85.4,73.0,70.3,29.9,20.8$ |

Spectroscopic data are in agreement with those reported in the literature. ${ }^{13}$
(3-Methylbuta-1,2-dien-1-yl)benzene (3n)

To a solution of CuI ( 3 equiv, $28 \mathrm{mmol}, 5.33 \mathrm{~g}$ ) and LiBr ( 3 equiv, $28 \mathrm{mmol}, 2.43 \mathrm{~g}$ ) in THF $(60 \mathrm{~mL})$ at $0{ }^{\circ} \mathrm{C}$ was added dropwise phenylmagnesium bromide ( 2.8 mol. $\mathrm{L}^{-1}$ in $\mathrm{Et}_{2} \mathrm{O}, 3$ equiv, $28 \mathrm{mmol}, 10 \mathrm{~mL}$ ). After 25 min stirring at $0{ }^{\circ} \mathrm{C}$, 2-methylbut-3-yn-2-yl acetate ( 1 equiv, $9.33 \mathrm{mmol}, 1.18 \mathrm{~g})$ in solution in THF ( 15 mL ) was added dropwise and the reaction mixture was stirred 2 h at the same temperature. The reaction was quenched by saturated $\mathrm{NH}_{4} \mathrm{Cl}$ solution, and extracted with diethyl ether (x3). The organic layers were washed successively with HCl 1 mol.L $\mathrm{L}^{-1}$ and water, and were then dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and concentrated under reduced pressure. Purification by flash chromatography on silica gel (eluent: pure PE) followed by Kugelrohr distillation ( 19 mbar, $120^{\circ} \mathrm{C}$ ) afforded the desired product as a colourless oil ( $94 \%$ purity (biphenyl as by-product), $736 \mathrm{mg}, 5.11 \mathrm{mmol}, 55 \%$ yield).

Spectroscopic data are in agreement with those reported in the literature. ${ }^{14}$

## Preparation of the acyl fluorides

## Procedure B:

All acid fluorides were synthesized using a literature procedure ${ }^{15}$ with little modification.
To a stirred suspension of diethylaminodifluorosulfinium tetrafluoroborate (1.0 equiv) in dichloromethane ( $6.25 \mathrm{~mL} / \mathrm{mmol}$ substrate) at room temperature was added the carboxylic acid ( 1.0 equiv) and triethylamine trihydrofluoride ( 1.0 equiv). The resulting mixture was stirred under nitrogen for 5 h at room temperature. The reaction was then quenched with a $5 \%$ $\mathrm{NaHCO}_{3}$ aqueous solution, stirred for 15 minutes, until the effervescence ceased and the resulting mixture was extracted twice using DCM. The organic phases were combined, dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered and concentrated. The crude mixture was purified by flash chromatography.

HRMS spectra of acyl fluorides could not be obtained using standard ionization methods due to the lack of stability of these compounds in these conditions.

## [1,1'-Biphenyl]-4-carbonyl fluoride (1b)

Following procedure B starting with [1,1'-biphenyl]-4-carboxylic acid.
Flash chromatography: PE/EtOAc 95:5
Yield: 688 mg ( $86 \%$ yield) of a white solid.

## Copper-catalyzed boroacylation of allenes

## Standard procedure for the optimization of the reaction conditions

A flame-dried Schlenk was loaded with the copper catalyst ( 0.05 equiv, 0.015 mmol ) and the ligand. After 3 vacuum/argon cycles, THF ( 0.5 mL ) was added until the solids were dissolved. To the obtained blue/green solution was added TMSONa ( 1 M in THF, 1.0/1.2 equiv, $0.30 / 0.36 \mathrm{mmol}$ ). Bispinacolatodiboron 2 ( $1.0 / 1.2$ equiv (same than TMSONa), $0.30 / 0.36 \mathrm{mmol}$ ) in solution in THF ( 0.5 mL ) was added to the resulting yellow solutions and the mixture immediately turned into a brown slurry. The allene $\mathbf{3}$ ( 1.0 equiv, 0.3 mmol ) and the acyl fluoride 1 ( 1.5 equiv, 0.45 mmol ) were simultaneously added in solution in THF ( 0.5 mL ). The mixture was stirred for 3 h at room temperature. The reaction mixture was filtered through silica (eluent: $\mathrm{Et}_{2} \mathrm{O}+1 \% \mathrm{NEt}_{3}$ ) and the solvents were removed under reduced pressure. 3,4,5-trimethoxybenzaldehyde was added as an internal standard and the yield was determined using ${ }^{1} \mathrm{H}$ NMR spectroscopy.

## Optimization of the copper source

Optimization of the ligand with $\left[\mathrm{Cu}(\mathrm{MeCN})_{4}\right] \mathrm{PF}_{6}$ as a standard copper source

## Test of the other parameters

## Scope of the reaction: procedure C:

A flame-dried Schlenk was loaded with anhydrous copper(II) acetate ( 0.05 equiv, 0.025 $\mathrm{mmol}, 4.5 \mathrm{mg}$ ) and 1,1'-bis(diphenylphosphino)ferrocene ( 0.06 equiv, $0.030 \mathrm{mmol}, 16.6 \mathrm{mg}$ ). After 3 vacuum/argon cycles, THF ( 0.8 mL ) was added until the solids were dissolved. To the obtained blue/green solution was added TMSONa ( 1 M in THF, 1.2 equiv, $0.6 \mathrm{mmol}, 0.6$ mL ). The resulting yellow solution was cooled down to $0{ }^{\circ} \mathrm{C}$ in a water/ice bath. Bispinacolatodiboron 2 ( 1.2 equiv, $0.6 \mathrm{mmol}, 152.4 \mathrm{mg}$ ) in solution in THF ( 0.8 mL ) was added and the mixture immediately turned into a brown slurry. The allene $\mathbf{3}$ (1.0 equiv, 0.5 mmol ) and the acyl fluoride $\mathbf{1}$ ( 1.5 equiv, 0.75 mmol ) were simultaneously added in solution in THF ( 0.8 mL ).

Procedure $\mathrm{C}_{1}$ : The mixture was stirred for 3 h at $0^{\circ} \mathrm{C}$.
Procedure $\mathrm{C}_{2}$ : The mixture was stirred for 18 h while warming up to room temperature.

The reaction mixture was filtered through silica (eluent: $\mathrm{Et}_{2} \mathrm{O}+1 \% \mathrm{NEt}_{3}$ ) and the solvents were removed under reduced pressure. Purification by flash chromatography on silica gel afforded the desired product 4.

## 2-Methyl-2-phenethyl-1-phenyl-3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)but-3-en-1one (4a)

Following procedure $\mathrm{C}_{1}$ starting with 0.5 mmol (3-methylpenta-3,4-dien-1-yl)benzene (3a), bis(pinacolato)diboron (2) and benzoyl fluoride (1a).

Yield: 155.1 mg ( $80 \%$ yield) of a slightly yellow oil.

MS Calcd for $[\mathrm{M}+\mathrm{H}]^{+} \mathrm{C}_{25} \mathrm{H}_{32} \mathrm{O}_{3} \mathrm{~B}: 391.2439 \quad$ Found: 391.2441
(HRMS ESI)

## 1-Phenyl-2-(1-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl) vinyl)octan-1-one (4l)

$$
\begin{aligned}
& \mathrm{C}_{22} \mathrm{H}_{33} \mathrm{BO}_{3} \\
& \mathrm{M}=356,31 \mathrm{~g} \cdot \mathrm{~mol}^{-1}
\end{aligned}
$$

Because of the low stability of this compound in the presence of silica gel or alumina, a modified procedure was used: the obtained product was directly oxidized into the corresponding ketone, which was isolated and characterized.

## 2-Hexyl-1-phenylbutane-1,3-dione (5l)

$$
\begin{aligned}
& \mathrm{C}_{16} \mathrm{H}_{22} \mathrm{O}_{2} \\
& \mathrm{M}=246.35 \mathrm{~g} \cdot \mathrm{~mol}^{-1}
\end{aligned}
$$

A flame-dried Schlenk was loaded with anhydrous copper(II) acetate ( 0.05 equiv, 0.025 mmol, 4.5 mg ) and 1, 1 '-bis(diphenylphosphino)ferrocene ( 0.06 equiv, $0.030 \mathrm{mmol}, 16.6 \mathrm{mg}$ ).

After 3 vacuum/argon cycles, THF ( 0.8 mL ) was added until the solids were dissolved. To the obtained blue/green solution was added TMSONa ( 1 M in THF, 1.2 equiv, $0.6 \mathrm{mmol}, 0.6$ mL ). The resulting yellow solution was cooled down to $0{ }^{\circ} \mathrm{C}$ in a water/ice bath. Bispinacolatodiboron 2 ( 1.2 equiv, $0.6 \mathrm{mmol}, 152.4 \mathrm{mg}$ ) in solution in THF ( 0.8 mL ) was added and the mixture immediately turned into a brown slurry. Nona-1,2-diene $\mathbf{3 1}$ ( 1.0 equiv, $0.5 \mathrm{mmol}, 62.1 \mathrm{mg}$ ) and benzoyl fluoride ( 1.5 equiv, $0.75 \mathrm{mmol}, 81 \mu \mathrm{~L}$ ) were simultaneously added in solution in THF ( 0.8 mL ). After 3 h stirring at $0{ }^{\circ} \mathrm{C}$, water ( 2.4 mL ) and $\mathrm{NaBO}_{3}$ ( 5 equiv, $2.5 \mathrm{mmol}, 249.5 \mathrm{mg}$ ) were added and the mixture was vigorously stirred at room temperature for $3 \mathrm{~h} . \mathrm{Et}_{2} \mathrm{O}$ and $\mathrm{NH}_{4} \mathrm{Cl}_{\text {(sat) }}$ were added and the layers were separated. After extraction with $\mathrm{Et}_{2} \mathrm{O}$, the organic layers were dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and concentrated under reduced pressure. Purification by flash column chromatography ( ${\mathrm{PE} / \mathrm{Et}_{2} \mathrm{O} 95: 5 \text { ) afforded the }}^{\mathrm{O}}$ ) pure product as a slightly yellow oil ( $88.5 \mathrm{mg}, 0.362 \mathrm{mmol}, 72 \%$ yield).

## (E)-6-(Benzyloxy)-2,2-dimethyl-1-phenyl-3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-

 yl)hex-3-en-1-one (4m)

$$
\begin{gathered}
\mathrm{C}_{27} \mathrm{H}_{35} \mathrm{BO}_{4} \\
\mathrm{M}=434.38 \mathrm{~g} \cdot \mathrm{~mol}^{-1}
\end{gathered}
$$

Following procedure $\mathrm{C}_{1}$ starting with 0.5 mmol (((5-Methylhexa-3,4-dien-1yl)oxy)methyl)benzene (3m), bis(pinacolato)diboron (2) and benzoyl fluoride (1a).

Flash chromatography: pentane/Et $\mathrm{t}_{2} \mathrm{O} 95: 5+1 \% \mathrm{Et}_{3} \mathrm{~N}$.
Yield: 55.8 mg ( $26 \%$ yield) of a colourless oil.
The stereochemistry was determined by H-H NOESY correlation.

For the only observed isomer, the NOESY spectrum showed a correlation between the vinylic proton and the gem-dimethyl protons. This product was assigned to the $(E)$-isomer.

## Tests with aliphatic acyl fluorides

| Entry | Acyl fluoride ( $\mathrm{R}=$ ) | Conditions | Results |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Conversion of 3a | Products |
| 1 | -Су | $0^{\circ} \mathrm{C}, 3 \mathrm{~h}$ | Complete | Only hydroboration product observed |
| 2 | $-\mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{Ph}$ | $0^{\circ} \mathrm{C}, 3 \mathrm{~h}$ | ~ 60-70\% | Ratio product/ hydroboration product $1: 0.6$ |
| 3 |  | $0^{\circ} \mathrm{C}$ to rt, 18 h | ~ 40-50\% | Hydroboration product mainly observed |

Oxidation of the vinylboron moiety: procedure $D$ :

To a solution of 4 ( 1 equiv, 0.2 mmol ) in $\mathrm{THF} / \mathrm{H}_{2} \mathrm{O} 1: 1$ was added $\mathrm{NaBO}_{3}$ ( 5 equiv, 1.0 $\mathrm{mmol}, 99.8 \mathrm{mg}$ ) and the mixture was vigorously stirred at room temperature for $2 \mathrm{~h} . \mathrm{Et}_{2} \mathrm{O}$ and $\mathrm{NH}_{4} \mathrm{Cl}_{\text {(sat) }}$ were added and the layers were separated. After extraction with $\mathrm{Et}_{2} \mathrm{O}$, the organic layers were dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$ and concentrated under reduced pressure. Purification by flash column chromatography $\left(\mathrm{PE} / \mathrm{Et}_{2} \mathrm{O}\right)$ afforded the pure product.

## 2-Methyl-2-phenethyl-1-phenylbutane-1,3-dione (5a)

Following procedure D starting with 0.2 mmol 2 -methyl-2-phenethyl-1-phenyl-3-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)but-3-en-1-one (4a).

Flash chromatography: $\mathrm{PE} / \mathrm{Et}_{2} \mathrm{O} 9: 1$ to $8: 2$
Yield: 44.0 mg ( $78 \%$ yield) of a slightly yellow oil.

| ${ }^{1} \mathbf{H}$ NMR $(\delta, \mathrm{ppm})$ <br> ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) | $\begin{aligned} & 7.83-7.79(\mathrm{~m}, 2 \mathrm{H}), 7.58-7.52(\mathrm{~m}, 1 \mathrm{H}), 7.46-7.41(\mathrm{~m}, 2 \mathrm{H}), 7.27- \\ & 7.21(\mathrm{~m}, 2 \mathrm{H}), 7.19-7.14(\mathrm{~m}, 1 \mathrm{H}), 7.09-7.06(\mathrm{~m}, 2 \mathrm{H}), 2.48-2.20 \\ & (\mathrm{~m}, 4 \mathrm{H}), 2.13(\mathrm{~s}, 3 \mathrm{H}), 1.56(\mathrm{~s}, 3 \mathrm{H}) \end{aligned}$ |

## 1-(1-Benzoylcyclohexyl)ethan-1-one (5c)

Following procedure D starting with 0.2 mmol phenyl(1-(1-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)vinyl)cyclohexyl)methanone (4c).

Flash chromatography: Pentane/Et $\mathrm{E}_{2} \mathrm{O} 96: 4$
Yield: 40.6 mg ( $88 \%$ yield) of a slightly yellow oil.

| ${ }^{1} \mathbf{H} \mathbf{N M R}(\delta, \mathrm{ppm})$ | $7.72-7.70(\mathrm{~m}, 2 \mathrm{H}), 7.51-7.48(\mathrm{~m}, 1 \mathrm{H}), 7.40-7.37(\mathrm{~m}, 2 \mathrm{H}), 2.25-$ |
| :--- | :--- |
| $\left(500 \mathrm{MHz}, \mathrm{CDCl}_{3}\right)$ | $2.20(\mathrm{~m}, 2 \mathrm{H}), 2.11(\mathrm{~s}, 3 \mathrm{H}), 1.95-1.89(\mathrm{~m}, 2 \mathrm{H}), 1.60-1.54(\mathrm{~m}, 2 \mathrm{H})$, |
|  | $1.50-1.30(\mathrm{~m}, 4 \mathrm{H})$ |

${ }^{13} \mathbf{C}$ NMR ( $\left.\delta, \mathrm{ppm}\right) \quad 208.4,200.6,137.0,132.7,128.6,128.6,66.6,31.9,26.8,25.6,22.5$ ( $125 \mathrm{MHz}, \mathrm{CDCl}_{3}$ )
Spectroscopic data are in agreement with those reported in the literature. ${ }^{17}$

## Suzuki coupling: procedure E:

The Suzuki coupling was carried out according to a literature procedure. ${ }^{18}$

A flame-dried Schlenk was loaded with $\operatorname{Pd}\left(\mathrm{PPh}_{3}\right)_{4}(0.05$ equiv, $0.01 \mathrm{mmol}, 11.6 \mathrm{mg})$, aryl halide ( 1.3 equiv, 0.26 mmol ) and $\mathrm{Cs}_{2} \mathrm{CO}_{3}$ ( 3 equiv, 0.6 mmol , 195.5 mg ). After 3 vacuum/argon cycles, dried and degassed DME ( 2.0 mL ) was added, followed by vinylboron 4 ( 1 equiv, 0.2 mmol ) in solution in DME $(0.5 \mathrm{~mL})$. The reaction mixture was stirred at $60^{\circ} \mathrm{C}$ for the indicated time. After dilution with EtOAc, the reaction mixture was filtrated on silica (EtOAc) and concentrated under reduced pressure. Purification by flash chromatography afforded the desired coupling product.

## Methyl 4-(1-(1-benzoylcyclohexyl)vinyl)benzoate (6c)

$$
\begin{aligned}
& \mathrm{C}_{23} \mathrm{H}_{24} \mathrm{O}_{3} \\
