#### Abstract

A new trienic $\alpha$-pyrone derivative asteltoxin $G(1)$ bearing a tetrahydrofuran ring and a new ochratoxin derivative named ochratoxin $\mathrm{A}_{1}(\mathbf{5})$, along with seven known compounds were isolated from a sponge-derived fungus Aspergillus ochraceopetaliformis. The compounds (1-9) were evaluated on the basis of spectroscopic analyses and comparison with those of the reported data. The new compound ochratoxin $\mathrm{A}_{1}(\mathbf{5})$ exhibited anti-inflammatory activity against IL-6 and TNF- $\alpha$ expression of the LPS-induced THP- 1 cells with inhibitory rates of $74.4 \%$ and $67.7 \%$ at concentration of $10 \mu \mathrm{M}$, respectively.

Keywords: sponge-derived fungus; Aspergillus ochraceopetaliformis; trienic $\alpha$-pyrone; ochratoxin; anti-inflammatory
