Unusual, Highly Efficient Fluorescence Emission Enhancement of
Conjugated Polymers with an Intramolecular Stack Structure through
Thermal Annealing at High Temperature

Young-Jae Jin and Giseop Kwak*

of Applied Chemical Engineering, Kyungpook National University, 1370 Sankyuk-dong,
Buk-ku, Daegu 702-701, Korea

Figure S1. FL emission spectra (excited at 420 nm) of PDPA-C1 film (thickness ~ 200 nm, spin-coated) after thermal annealing at 300 °C in different time durations.

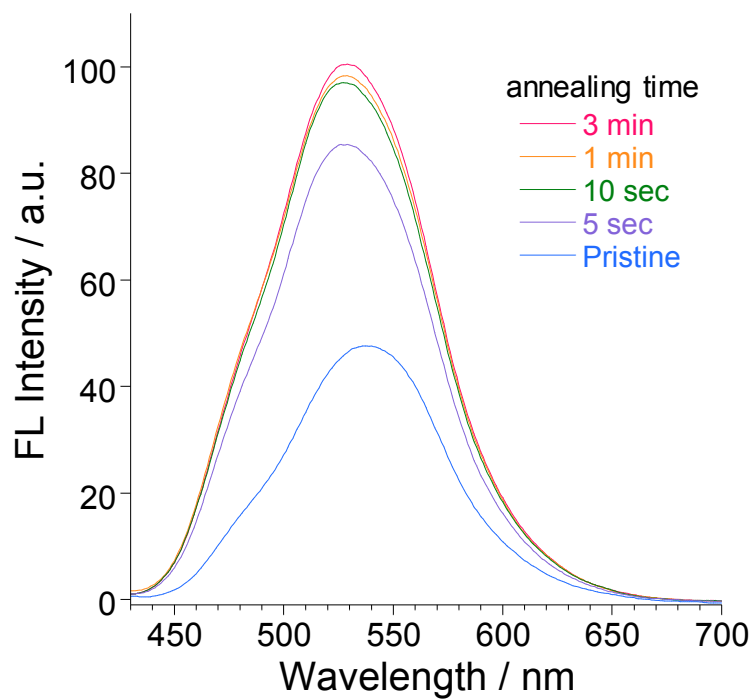

Figure S2. a) FL photographs and b) FL emission spectra (excited at 420 nm) of PDPA-C1 thick film (thickness $\sim 30\ \mu\text{m}$, cast from the toluene solution with an appropriate concentration) before and after thermal annealing at $300\ ^\circ\text{C}$ for 10 sec.
